

BIOFLO[®] 410 Fermentor/Bioreactor

A 20-liter, sterilizable-in-place fermentor/bioreactor from New Brunswick Scientific has been installed. This fermentor is of stainless steel construction, is automated, has capacity for 5.0–15.5 liters and has dissolved oxygen control. It is intended for scale-up of laboratory fermentation or for culture growth for the larger fermenters. It is designed for rapid heating for both sterilization and heat inductions. This fermentor was purchased with funds from an MTAF grant for the start-up of TRC.
